

11-16 Ford Traction Bars Install Notes

The fuel tank, fuel tank strap, or brackets may be in the way on some trucks. To alleviate this, you may have to do the following to complete install:

- Remove brackets on the drivers side frame that are in the way
- Drop the fuel tank to drill through the frame
 - If you do not drop the fuel tank, then you will need to proceed with extreme caution when drilling thru the frame for the bolts.
- It may be necessary to fish the bolts thru the frame with pull wire if you choose not to drop the fuel tank
